
LEVEL-HARD EPOXY HYBRID

CFFS Level-Hard™ is the newest addition to our full lineup of easy to install, durable floor coating systems. Developed as an Epoxy Hybrid, this coating exhibits excellent self leveling characteristics as well as exceptional adhesion to a variety of substrates. Level-Hard is a very versatile coating that can be used a primer, build coat, broadcasting resin, troweling resin, or topcoat. 100% solids formulation is great for leveling of low spots, producing high build films, and creating one-of-a-kind floors when combined with our CFFS Pearlescence™ Metallic Tints. Due to the extended cure time of this material (8-12 @ 70°F) it has the ability to flow and move, thus filling in minor imperfections and forming a seamless coating. No odor and almost zero VOC content make it the perfect choice for interior applications ranging from residential basements to retail stores and commercial offices. Excellent abrasion and impact resistance leads to longer lasting floors that will hold up the harshest environments around. With a compressive strength of over 12,500 psi, Level-hard is ideal for heavy vehicle traffic, forklift traffic and high impact applications.
