
POLYFLEX-93 FLEXIBLE POLYUREA JOINT FILL

CFFS POLYFLEX-93™ is a two component, 100% solids, VOC Compliant, self leveling flexible control and expansion joint filler. This product cures rapidly and consistently at temperatures ranging from -20°-120°F. With a tack-free time of under 5 minutes, Polyflex-93 reduces downtime and allows repaired areas to be reopened to vehicle or foot traffic in one hour. Excellent elastomeric properties create flexibility while a tenacious bond to the concrete sidewalls of the joints leads to long lasting results and performance. Polyflex-93 is easily coated over using a wide variety of CFFS products or can be used as a stand-alone joint filler for concrete polishing or preventative maintenance. It is available in standard Concrete Gray or can be custom color matched for joints that need similar coloration as the surrounding substrates. Typical application methods include using a dual cartridge caulk gun or high-flow dual component pump system. High productivity rates can be reached when combined with the right type of delivery system. Feel free to contact CFFS for more information on custom colors, product limitations and pump options.
