

CITADEL® POLYUREA-350

DESCRIPTION AND USES

Polyurea-350 is a two-component, 98% solids, VOC Compliant Polyurea that was developed as a primer/basecoat for a variety of coating systems. This coating provides exceptional adhesion to a large number of substrates and performs well in a wide range of temperatures and climate conditions. Extended working time makes it a great choice for both residential and commercial applications. Patent-Pending Adjustable Cure Rate Technology™ simplifies installations in all temperatures by maintaining consistent cure times and material pot life.

PRODUCTS

SKU	DESCRIPTION
10142	Part A - 5 Gallon
10147	Part B Clear - 5 Gallon
10146	Part B Gray - 5 Gallon
10151B	Part B Summer Tan - 5 Gallon
10121B	Part B Winter Clear - 5 Gallon
10155	Part B Winter Gray - 5 Gallon
10157	Part B Winter Tan - 5 Gallon
10124	Part B Artic Clear - 5 Gallon
10136	Part B Artic Gray - 5 Gallon
10134	Part B Artic Tan - 5 Gallon
10104	Summer Clear 3 Gallon Kit
10110B	Summer Gray 3 Gallon Kit
10109B	Summer Tan 3 Gallon Kit
10105	Winter Clear 3 Gallon Kit
10163B	Winter Gray 3 Gallon Kit
10165B	Winter Tan 3 Gallon Kit
10106B	Artic Clear 3 Gallon Kit
10167B	Artic Gray 3 Gallon Kit
10169B	Artic Tan 3 Gallon Kit

RECOMMENDED TOPCOATS

- SLE-100
- RG-70
- RG-80x
- UL-80
- Poly-1 HD
- Poly-2 Ultra
- Poly-3 WB

PRODUCT APPLICATION

READ ALL INSTRUCTIONS CAREFULLY BEFORE STARTING PROJECT

SURFACE PREPARATION

NEW CONCRETE/PREVIOUSLY COATED CONCRETE:
New concrete should be allowed to cure for a minimum of 28 days. The concrete must be structurally sound, dry, and free of grease, oils, dust, curing compounds and other coatings or contaminants (SSPC-SP1). Surface laitance must be removed. Rising moisture vapor emission rate must not exceed 3 lb. per 1000 sq. ft. over a 24 hour period as measured by calcium chloride test method ASTM F-1869.

PRODUCT APPLICATION (cont.)

SURFACE PREPARATION (cont.)

The application area must be completely free of sealers, oils, dirt, paint, alkali, penetrating sealers, or any foreign materials that would prevent Polyurea-350 from penetrating the concrete surface. The recommended substrate should have a minimum concrete surface profile (CSP) of 2-3 in accordance to the ICRI Guideline No. 03732. Contact ICRI at www.ICRI.org for more information on these surface profiles. Surface must be dry prior to application of Polyurea-350.

MIXING

Both components should be pre conditioned to a minimum of 50°F (10°C) prior to use.

Thoroughly mix each component separately before combining.

If only using part of a container, be sure to use a separate mixer blade for each component to avoid cross contamination.

NOTE: The Part B component uses a moisture scavenger in its formulation to pull out any moisture which may have entered during the filling process. When this occurs, the scavenger settles out as a solid in the container. There is no need to try and mix this hard settled material into the liquid. Keep your paddle mixer above the packed out scavenger and pre-mix as normal. It is still required to pre-mix the material prior to use. Another option would be to transfer the material to a different mixing bucket, then mix as normal.

Pour the Part A and Part B components together in a clean, dry five gallon container and power mix at 500-700 rpm for a minimum of two minutes. Do not entrain air into the mixing. Do not mix more material than can be applied in 20-25 minutes.

If using less than a full container, combine the components using a mixing ratio of 1:2 by volume, Part A to Part B.

TINTING (Clear)

Tinting is only to be done after Part A and Part B have been thoroughly mixed. If tinting, add 12% by volume of the selected 844 Colorant (1 quart of tint per 2 gallons of activated material). Power mix until a uniform color is achieved.

If there are any questions on the tint process of this product, please consult our technical service department.

EQUIPMENT RECOMMENDATIONS

ROLLER: Use a high quality ¾ inch lint-free roller with a phenolic core.

BRUSH: Use a disposable natural fiber chip brush, 2-4 inch wide for cut in work.

SQUEEGEE: Contact Rust-Oleum for recommendation.

CITADEL® POLYUREA-350

PRODUCT APPLICATION (cont.)

APPLICATION

Apply only when air, material and floor temperatures are between 0-90°F (-18 -32°C) and surface temperature is at least 5°F (3°C) above the dew point. The relative humidity of the air should not be greater than 85%. Do not apply in direct sunlight or when temperature is rising. Colder environmental conditions can slow the cure of Polyurea-350. Be sure the substrate is completely dry. Variability in these conditions during application may lead to surface defects. For application outside of this temperature range, please contact Rust-Oleum Technical Service.

Immediately after mixing, pour the material onto the floor in a long, 8 to 12 inch wide stripe.

NOTE: Do not scrape the sides or bottom of the container. Use only the material that flows naturally out of the container. Also, do not turn the container upside down and leave on the floor to drain. Doing so may result with unactivated material from the sidewall of the container being applied. This will cause soft spots in the coating.

Use a rubber squeegee to spread the material out and achieve the 80-350 sq.ft./gal. spread rate. Back roll the material smooth using a 3/8" lint free roller with a phenolic core to smooth out the finish.

If being used as a basecoat for a color aggregate or color flake finish, begin to broadcast the desired amount of aggregate or flake unto the coating as soon as the roller application is completed. Do not do any additional rolling after the broadcasting material.

THINNING: None required. **NOTE:** If necessary, can be thinned up to 20 percent with acetone or methyl ethyl ketone.

CLEAN-UP: Methyl ethyl ketone

PERFORMANCE CHARACTERISTICS

TENSILE STRENGTH

METHOD: ASTM D412
TYPICAL VALUE: 3600

ELONGATION

METHOD: ASTM D412
TYPICAL VALUE: 198

TEAR STRENGTH (PLI)

METHOD: ASTM 2240
TYPICAL VALUE: 350

FLEXIBILITY (1/8" MANDREL)

METHOD: ASTM D1737
RESULT: Pass

IMPACT RESISTANCE

METHOD: ASTM D2794
TYPICAL VALUE: Direct/Reverse, 250/285 inch pounds.

ADHESION

METHOD: ASTM D4541
TYPICAL VALUE: >500 psi

CHEMICAL RESISTANCE

CHEMICAL	RESULT (77°F/25°C)
Acetic Acid 100%	C
Acetone	C
Ammonium Hydroxide 50%	RC

Chemical Resistance: Chart Key

R=recommended/little or no visible damage
RC=recommended conditional/some effect, swelling or discoloration
C=Conditional/Cracking-wash within one hour of spillage to avoid affects
NR=Not recommended
Dis=discolorative

CITADEL® POLYUREA-350

PHYSICAL PROPERTIES

		POLYUREA-350
Resin Type		Polyurea
Weight	Per Gallon	9.9 lbs.
	Per Liter	1.2 kg
Solids by Volume		98%
Volatile Organic Compounds		<50 g/l**
Mixing Ratio		1:2 (Part A to Part B)
Induction Time		None required
Pot Life		20-25 minutes
Recommended Dry Film Thickness (DFT)		5-20 mils
Practical Coverage Rate at Recommended DFT		80-350 sq.ft./gal. Coverage rate can vary depending on the texture and porosity of the concrete
Dry Times @ 70-80°F (21-27°C) and 50% Relative Humidity†	Recoat	2-12 hours*
	Light Traffic	2-4 hours
	Full Traffic	24 hours
Shelf Life		12 months
Safety Information		See SDS

Calculated values are shown and may vary slightly from the actual manufactured material.

† Extreme cold temperatures may slow cure times.

* If 12 hour recoat time has elapsed, the coating must be sanded prior to topcoating.

** Calculated Applied VOC
